3/28/2014	SB1400109	3103 RHODE ISLAND AVE NE	Permanent sub slab soil vapor probes will be installed using an electric drill and manual placement of the probe. A 1 inch diameter hole, approximately 1 inch deep will be drilled, and then a 5/8 inch diameter drill will be used to advance the hole to approximately 3 inches below the base of the slab. Two soil vapor sampling points will be constructed using 0.375 inch outer diameter stainless steel screen and piping installed approximately 3 inches below the bottom of the concrete slab. The vapor probes will be inserted into the holes and grouted with a quick setting hydraulic cement powder. Sub slab vapor samples will be collected and analyzed for VOCs using USEPA Method TO 15. This work is required in accordance with DDOE Directive dated May 1, 2013. 3/12/2014	SB1400197	1545 GIRARD ST NE	A total of four 4 soil test borings will be drilled at the above referenced site at the front of the existing building. The borings will be drilled using 3.25-inch continuous flight augers. The borings will extend to a maximum depth of 30 feet below current site grades. The borings will be drilled using a truck- or ATV-mounted drill rig. We anticipate that the maximum annular diameter of the hole from the field exploration including the auger flights will be about 6-inches. The soil sampling interval will be every 2.5 feet within the upper 10 feet of the borings, followed by every 5 feet to the maximum depth explored. The samples will be containerized in glass jars for geotechnical classification and laboratory testing. 3/6/2014	SB1400192	101 N ST NW	As directed by DDOE Toxic Substance Division in a letter from Mr. Richard Jackson, dated February 21, 2014, ECS will install a total of four deep monitoring wells in areas where MIP results indicated the potential presence of possible chlorinated solvents. The MIP boring locations selected for deep monitoring well installation include M1, M2, M6, and M7. These wells are in addition to previously proposed wells in the area of the former USTs. In addition to the four deep wells one additional deep well will be placed in the geothermal well. One shallow well will also be placed next to MIP location M7 to monitor the upper aquifer conditions. In total this work plan covers the installation and sampling of six monitoring wells. The locations of the proposed monitoring wells are depicted on Figure 1. The wells will be installed using a hollow-stem auger rig. Five of the wells will be completed to approximately 45 ft below ground surface and one well will be installed to approximately 25 ft below ground surface. During drilling operations soil samples will be collected, field screened and submitted for laboratory analysis.	Building	Construction	Miscellaneous	Soil Boring	Permit Issued	53.90	0554 0860	5	5E		ECS MID-ATLANTI ECS MID-ATLANTIC	District of Columbia Department of General Service Gebrmichael
