9/4/2015	B1500981	1865 PARK RD NW	1865 Park Road Flats is a planned historic restoration project located in the Mount Pleasant area of Washington, DC, specifically 1865 Park Road, NW. The restored property will consist of two high end luxury condominiums ranging in size from 1,500 sf to 2,400 sf. The proposed structure is 3 stories, wood-framed construction, cementitious siding, and a combination of standing seam metal roof and asphalt based shingles. The building will be fully sprinklered. Site work consists of new utilities with sanitary and storm sewer, fire/domestic water, etc., tiered segmental retaining walls, fully landscaped, and a concrete pad consisting of 3 parking spots	Building	Construction	New Building	NA	Permit Issued	1346.01	2614 0032	1	1D		MATCAP, LLC	MATCAP, LLC	No

9/2/2015	SB1500432	54 HANOVER PL NW	We will perform a total of 6 borings across the property with a Geoprobe drill rig. Per the DDOE approved CAP, the borings will be advanced to a depth of 5 feet below field evidence of petroleum impact which is currently assumed to be to a depth of 25-35 feet. The diameter of the boreholes will be 2.25 inches. Select soil and groundwater samples will be collected. Permanent groundwater wells will not be installed. Following completion of each boring, the boring will be grouted. Subslab vapor samples will also be collected from directly beneath the concrete slab of the existing building. The soil surface will not be penetrated as part of the subslab vapor sampling. See the attached work plan for specific details regarding the soil/groundwater/subslab vapor sampling and grouting. 9/4/2015	SB1500441	770 M ST SE	We will perform a total of two soil borings on the proposed site. The borings will be advanced to a depth of 80 feet below existing site grades, and will be located within the bounds of the private property. The borings will be drilled utilizing 3.25-inch hollow stem, continuous flight augers. The borings will be performed utilizing an ATV-mounted drill rig and will generate an approximate 6-inch annulus. After geotechnical exploration is completed, the borings will be backfilled with bentonite slurry, which has a consistency of two pounds bentonite powder to one gallon water. Borehole abandonment will be performed by tremie-grouting via a positive-displacement pump from the bottom of the borehole. 9/22/2015	SB1500452	823 PENNSYLVANIA AVE SE	The proposed work consist on abandon 19 groundwater monitoring wells. Antea Group has contracted Advanced Environmental Concepts, LLC -AECO- to abandon five 1 inch monitoring wells, three 2 inch monitoring wells, and eleven 4 inch monitoring and recovery wells. At each monitoring well location completed in asphalt, the manway will be removed and then the well will be properly abandoned to the surface using Portland cement. The Portland cement mixing ratio is as follows- 94 lbs. cement / 7 lbs. bentonite / 6 gallons water. At each monitoring well location completed in grass, the concrete pad -if present- and manway will be removed and then the well will be properly abandoned using Portland cement -same ratio as above-, brought to grade with selfcompacting crushed stone, and then covered with top soil and grass seed. For recovery well locations, which include 3 foot by 3 foot subgrade vaults approximately 18 inches deep, well vaults will be removed as part of the abandonment and the remaining space will be backfilled with self compacting material and brought to grade with cement. vaults will be removed as part of the abandonment and the remaining space will be backfilled with self compacting material and brought to grade with cement. As per site plans, work plans report, DDOE/UST approved letter, DDOE/Well Abandonment Work plan, DC Well Abandonment Form. 9/25/2015	SB1500467	55 M ST NE	Drill and sample two soil borings using hollow stem augers on a truck-mounted or track-mounted drill rig, on the 55 M Street, NE site. Collect one undisturbed sample, via Shelby Tube, in each boring location. The soil boring will be performed to approximate depth of 75 feet below the existing grade. The boreholes will be backfilled after drilling and sampling is completed by using Bentonite Powder and to form slurry. The slurry will be poured from the bottom using tremie pipe with positive displacement pump, as described below. All drill cuttings generated by the borehole activities will be containerized and appropriately disposed of in accordance with the generator's waste profile information. All borings and probe holes will be grouted with a mixture of bentonite powder and water to form a grout mixture. Once the borehole is completed, the bentonite slurry will be poured directly into the borehole to an elevation of one foot from the top and then capped with Portland cement. The ratio for the grouting material will be two pounds of bentonite per one gallon of potable water, per the DC Well Construction Requirements. Although no known contamination is suspected at this site, drill rods will be cleaned using an Alconox solution and rinsed with potable water between each borehole. 9/30/2015	B1505626	3302 15TH ST SE	This project involves the construction of a new equipment enclosure located in the front yard of the current Alabama Avenue Substation No. 136, located at 3302 15th Street SE, Washington, DC 20032. The new structure will consist of three electrical equipment bays with mat foundations enclosed by 1' thick reinforced concrete walls with a 4" masonry façade to match the existing building and health and safety screen roofing. Each foundation will include oil containment which drains to a common Oil Reclaiming Pit. In addition, this project will require an 225' extension of the existing driveway, the installation of a retaining wall and a new landscaping plan to provide cover of the new enclosure. The total disturbed area will be approximately 25,350 sq. ft.	Building	Construction	Addition	NA	Permit Issued	26981.60	5912 0010	8	8B	R-5-A	ADRIENNE SHEFFIELD	Pepco	Yes
