

Influenza Surveillance Report

Division of Epidemiology - Disease Surveillance and Investigation
 District of Columbia Department of Health

2016-2017 Influenza Season Week 1 (January 1, 2017 – January 7, 2017)

(All data are preliminary and may change as more reports are received)

SUMMARY

- 36 cases of Influenza were reported by hospitals during this reporting period
- Zero pediatric deaths were reported during this period
- For the 2016-2017 Influenza Season to-date, 205 positive Influenza cases have been reported
- DC PHL did not report any specimens tested for week 1
- While flu activity remains high, activity has dropped slightly since last week

INFLUENZA SURVEILLANCE FROM HOSPITALS & AMBULATORY CARE FACILITIES

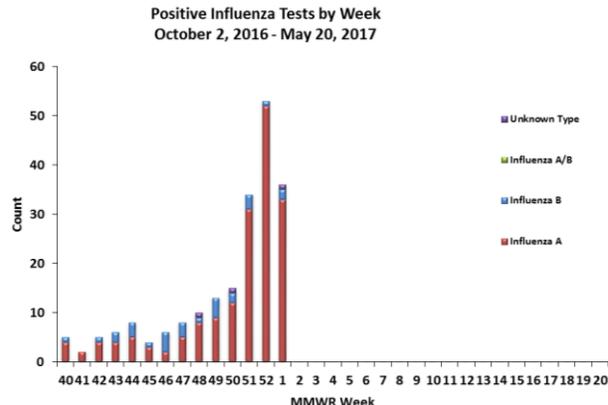

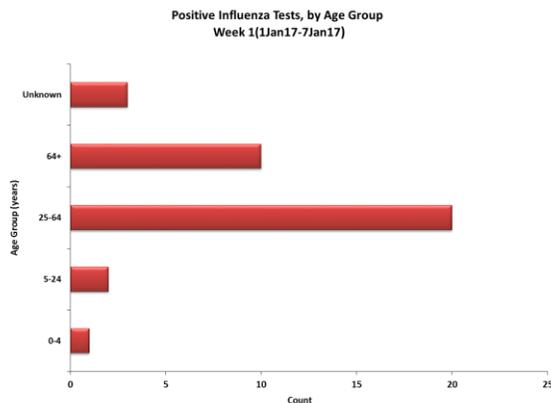

District of Columbia hospitals and laboratories report detailed information on cases of Influenza on a daily basis. However, in accordance with CDC guidelines, only Influenza-associated deaths in cases <18 years of age and Novel Influenza A infections are reportable. We also request that Influenza hospitalizations be reported if possible.

The table below summarizes weekly and cumulative cases of Influenza for the 2016-2017 Season. Data are also presented by age group and by number of cases reported weekly. During week 1 (January 1, 2017–January 7, 2017), there were 36 new cases of Influenza reported. To date, the District has received 205 positive Influenza cases reported by hospitals.

Surveillance of Influenza Cases Reported By Influenza Type

	Week 1 (January 1, 2017 – January 7, 2017)		Cumulative Cases for Weeks 40 – 20 (October 2, 2016 – May 20, 2017)	
	Count	Percentage	Count	Percentage
Influenza A	34	(94.44%)	175	(85.37%)
Influenza B	2	(5.56%)	28	(13.66%)
Influenza A/B	0	(0.00%)	0	(0.00%)
Influenza (not typed)	0	(0.00%)	2	(0.97%)
Total	36*	(100%)	205*	(100.00%)

*Includes results from Rapid Diagnostic Testing, Viral Culture, RT-PCR, Serology, and Immunofluorescence.

RAPID DIAGNOSTIC TESTING

Rapid Diagnostic Tests are screening tests used to detect the Influenza virus in a short period of time. While initially less accurate than PCR and viral culture, rapid diagnostics are more accurate as the Influenza season progresses. During week 1, 153 out of a total of 417 tests were performed using rapid diagnostic testing in clinical laboratories. Of these, 19 (12.42%) positive Influenza specimens were identified using rapid diagnostics.

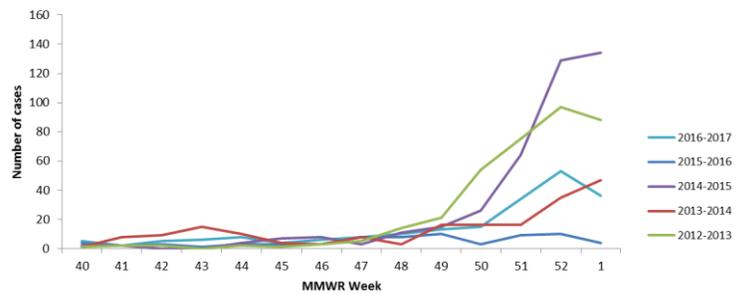

Week: 1 (January 1, 2017 – January 7, 2017)	
No. of specimens tested Rapid Diagnostics	153
No. of positive specimens (%)	19 (12.42%)
Positive specimens by type/subtype	
Influenza A	18 (94.74%)
Influenza B	1 (5.26%)
Influenza A/B	0 (0%)
Influenza – unknown type	0 (0%)

WEEK 1 COMPARISON WITH PREVIOUS SEASONS

For week 1, there were 36 cases in the current 2016-2017 season, 4 cases in last year’s 2015-2016 season, 134 cases in the 2014-2015 season, 47 in the 2013-2014 season, and 88 in the 2012-2013 season.

Cumulatively, there are a total of 205 cases in the district up to week 1 for the current season, 71 during the 2015-2016 season, 405 in the 2014-2015 season, 191 in the 2013-2014 season, and 365 in the 2012-2013 season.

Number of Cases as of Week 1 for 2012-2013, 2013-2014, 2014-2015, 2015-2016, 2016-2017

INFLUENZA-LIKE ILLNESS (ILI) SURVEILLANCE

Sentinel surveillance for ILI consists of three outpatient reporting sites for the District of Columbia. The sentinel surveillance sites report the total number of ILI cases encountered per week and the total number of patients seen at the clinic during that same week. For this system, ILI is defined as the existence of fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat in the absence of a known cause other than Influenza.

For week 1, sentinel providers reported 142 out of 1809 visits (7.85%) that met the criteria for ILI.

Sentinel Surveillance ILI Activity for Washington, DC

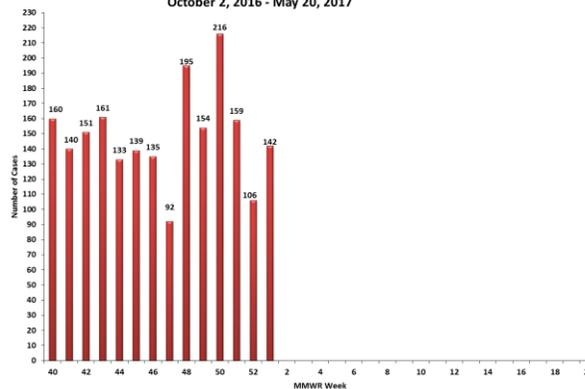

Week of	Activity *
Jan 1 – Jan 7	Local

***No Activity** – overall clinical activity remains low and there are no lab confirmed Influenza cases;

Sporadic – isolated lab confirmed Influenza cases reported and ILI activity is not increased;

Local – increased ILI activity and recent lab confirmed Influenza cases. As the District of Columbia is not a state, this is the highest level of ILI activity it can report.

Influenza-Like Illness Reported by MMWR Weekly October 2, 2016 - May 20, 2017

INFLUENZA TESTING BY THE DISTRICT OF COLUMBIA PUBLIC HEALTH LABORATORY (DC PHL)

The DC PHL subtypes human isolates to monitor the circulating strains of Influenza. The isolates are submitted to the DC PHL by hospitals and commercial laboratories. DC PHL did not report any specimens tested for week 1.

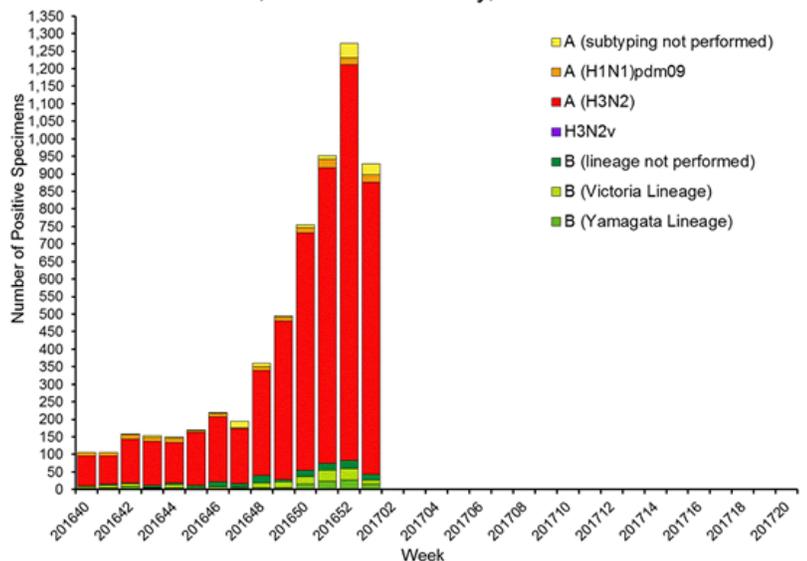

DC PHL Surveillance of Influenza Cases Reported By Influenza Subtype

DC PHL Influenza Testing	Jan 1, 2017 – Jan 7, 2017	Total Cases October 2, 2016 – May 20, 2017
Number of specimens tested	0	0
◆ Number of specimens positive for Influenza:	0 (0%)	0 (0%)
● Influenza A	0 (0%)	0 (0%)
▪ H1 2009 H1N1	0 (0%)	0 (0%)
▪ H1 seasonal	0 (0%)	0 (0%)
▪ H3	0 (0%)	0 (0%)
● Influenza B	0 (0%)	0 (0%)

NATIONAL INFLUENZA ASSESSMENT

The CDC's weekly seasonal Influenza surveillance report for week 1 noted that influenza activity increased in the United States. The proportion of deaths due to Influenza and pneumonia in the US was below the epidemic threshold. 3 pediatric deaths were reported to the CDC during week 1, one associated with an A(H3) virus, one with an un-typed A virus, and one with an influenza B virus. For the 2016-2017 season, a total of 3 pediatric deaths associated with Influenza have been reported in the US. During week 1, 1,973 specimens were tested by public health laboratories, of which 928 were positive. Of the 928 respiratory specimens that tested positive during week 1, 885 (95.4%) were Influenza A and 43 (4.6%) were Influenza B. Of the Influenza A samples, 21 (2.4%) were 2009 H1N1, 833 (94.1%) were H3, and 31 (3.5%) were un-typed.

Influenza Positive Tests Reported to CDC by U.S. Public Health Laboratories, National Summary, 2016-2017 Season
