PART W

RADIATION SAFETY REQUIREMENTS FOR WIRELINE SERVICE OPERATIONS AND SUBSURFACE TRACER STUDIES

Sec. W.1 Purpose. The regulations in this Part establish radiation safety requirements for using sources of radiation for wireline service operations including mineral-logging, radioactive markers, and subsurface tracer studies. The requirements of this Part are in addition to, and not in substitution for, the requirements of Parts A, B, C, D, and J of these regulations.

Sec. W.2 Scope. The regulations in this Part apply to all licensees or registrants who use sources of radiation for wireline service operations including mineral-logging, radioactive markers, or subsurface tracer studies.

Sec. W.3 Definitions. As used in this Part, the following definitions apply:

"Field station" means a facility where radioactive sources may be stored or used and from which equipment is dispatched to temporary jobsites.

"Injection tool" means a device used for controlled subsurface injection of radioactive tracer material.

"Logging assistant" means any individual who, under the personal supervision of a logging supervisor, handles sealed sources or tracers that are not in logging tools or shipping containers or who performs surveys required by Section W.401.

"Logging supervisor" means the individual who uses sources of radiation or provides personal supervision of the utilization of sources of radiation at the well site.

"Logging tool" means a device used subsurface to perform well-logging.

"Mineral logging" means any logging performed for the purpose of mineral exploration other than oil or gas.

"Personal supervision" means guidance and instruction by the supervisor who is physically present at the jobsite and watching the performance of the operation in such proximity that contact can be maintained and immediate assistance given as required.

"Radioactive marker" means radioactive material placed subsurface or on a structure intended for subsurface use for the purpose of depth determination or direction orientation.

"Source holder" means a housing or assembly into which a radioactive source is placed for the purpose of facilitating the handling and use of the source in well-logging operations.

"Subsurface tracer study" means the release of a substance tagged with radioactive material for the purpose of tracing the movement or position of the tagged substance in the well-bore or adjacent formation.
"Temporary jobsite" means a location where radioactive materials are present for the purpose of performing wireline service operations or subsurface tracer studies.

"Uranium sinker bar" means a weight containing depleted uranium used to pull a logging tool down toward the bottom of a well.

"Well-bore" means a drilled hole in which wireline service operations or subsurface tracer studies are performed.

"Well-logging" means all operations involving the lowering and raising of measuring devices or tools which may contain sources of radiation into well-bores or cavities for the purpose of obtaining information about the well or adjacent formations.

"Wireline" means a cable containing one or more electrical conductors which is used to lower and raise logging tools in the well-bore.

"Wireline service operation" means any evaluation or mechanical service which is performed in the well-bore using devices on a wireline.

**Prohibition**

**Sec. W.4**  Prohibition. No licensee shall perform wireline service operations with a sealed source(s) unless, prior to commencement of the operation, the licensee has a written agreement with the well-operator, well-owner, drilling contractor, or land owner that:

a. in the event a sealed source is lodged downhole, a reasonable effort at recovery will be made; and

b. in the event a decision is made to abandon the sealed source downhole, the requirements of Paragraph W.501c. [and the name of any other State Agency having applicable regulations] shall be met.

**Equipment Control**

**Sec. W.101**  Limits on Levels of Radiation. Sources of radiation shall be used, stored, and transported in such a manner that the transportation requirements of Part T and the dose limitation requirements of Part D of these regulations are met.

**Sec. W.102**  Storage Precautions

a. Each source of radiation, except accelerators, shall be provided with a storage or transport container. The container shall be provided with a lock, or tamper seal for calibration sources, to prevent unauthorized removal of, or exposure to, the source of radiation.

b. Sources of radiation shall be stored in a manner which will minimize danger from explosion or fire.
Sec. W.103  Transport Precautions.  Transport containers shall be physically secured to the transporting vehicle to prevent accidental loss, tampering, or unauthorized removal.

Sec. W.104  Radiation Survey Instruments

a.  The licensee or registrant shall maintain sufficient calibrated and operable radiation survey instruments at each field station to make physical radiation surveys as required by this Part and by Section D.201 of these regulations.  Instrumentation shall be capable of measuring 0.1 milliroentgen (25.8 nanocoulombs/kg) per hour through at least 50 milliroentgens (12.9 microcoulombs/kg) per hour.  Survey instruments acquired before [insert the effective date of this Part] and capable of measuring 0.1 milliroentgen (25.8 nanocoulombs/kg) per hour through at least 20 milliroentgens (5.16 microcoulombs/kg) per hour also satisfies this requirement [insert date 5 years after the effective date of this Part].

b.  Each radiation survey instrument shall be calibrated:

   i.  at intervals not to exceed 6 months and after each instrument servicing;

   ii. for linear scale instruments, at two points located approximately 1/3 and 2/3 of full-scale on each scale; for logarithmic scale instruments, at midrange of each decade, and at two points of at least one decade; and for digital instruments, at appropriate points; and

   iii. so that accuracy within 20 percent of the true radiation level can be demonstrated on each scale.

c.  Calibration records shall be maintained for a period of two years for inspection by the Agency.

Sec. W.105  Leak Testing of Sealed Sources

a.  Requirements.  Each licensee using sealed sources of radioactive material shall have the sources tested for leakage.  Records of leak test results shall be kept in units of microcuries (Bq) and maintained for inspection by the Agency for six months after the next required leak test is performed or until transfer or disposal of the sealed source.

b.  Method of Testing.  Tests for leakage shall be performed only by persons specifically authorized to perform such tests by the Agency, the U.S. Nuclear Regulatory Commission (NRC), an Agreement State, or a Licensing State.  The test sample shall be taken from the surface of the source, source holder, or from the surface of the device in which the source is stored or mounted and on which one might expect contamination to accumulate.  The test sample shall be analyzed for radioactive contamination, and the analysis shall be capable of detecting the presence of 0.005 microcurie (185 Bq) of radioactive material on the test sample.

c.  Interval of Testing.  Each sealed source of radioactive material shall be tested at intervals not to exceed 6 months.  In the absence of a certificate from a transferor indicating that a test has been made prior to the transfer, the sealed source shall not be put into use until tested.  If, for any reason, it is suspected
that a sealed source may be leaking, it shall be removed from service immediately and tested for leakage as soon as practical.

d. **Leaking or Contaminated Sources.** If the test reveals the presence of 0.005 microcurie (185 Bq) or more of leakage or contamination, the licensee shall immediately withdraw the source from use and shall cause it to be decontaminated, repaired, or disposed of in accordance with these regulations. A report describing the equipment involved, the test results, and the corrective action taken shall be filed with the Agency within five days of receiving the test results.

e. **Exemptions.** The following sources are exempted from the periodic leak test requirements of Paragraphs W.105a. through d.:

   i. hydrogen-3 sources;

   ii. sources of radioactive material with a half-life of 30 days or less;

   iii. sealed sources of radioactive material in gaseous form;

   iv. sources of beta- or gamma-emitting radioactive material with an activity of 100 microcuries (3.7 MBq) or less; and

   v. sources of alpha-emitting radioactive material with an activity of 10 microcuries (0.370 MBq) or less.

**Sec. W.106  Quarterly Inventory.** Each licensee or registrant shall conduct a quarterly physical inventory to account for all sources of radiation. Records of inventories shall be maintained for two years from the date of the inventory for inspection by the Agency and shall include the quantities and kinds of sources of radiation, the location where sources of radiation are assigned, the date of the inventory, and the name of the individual conducting the inventory.

**Sec. W.107  Utilization Records.** Each licensee or registrant shall maintain current records, which shall be kept available for inspection by the Agency for two years from the date of the recorded event, showing the following information for each source of radiation:

a. make, model number, and a serial number or a description of each source of radiation used;

b. the identity of the well-logging supervisor or field unit to whom assigned;

c. locations where used and dates of use; and

d. in the case of tracer materials and radioactive markers, the utilization record shall indicate the radionuclide and activity used in a particular well.

**Sec. W.108  Design, Performance, and Certification Criteria for Sealed Sources Used in Downhole Operations**
a. Each sealed source, except those containing radioactive material in gaseous form, used in downhole operations and manufactured after [insert a date one year after the effective date of this Part] shall be certified by the manufacturer, or other testing organization acceptable to the Agency, to meet the following minimum criteria:

i. be of doubly encapsulated construction;

ii. contain radioactive material whose chemical and physical forms are as insoluble and non-dispersible as practical; and

iii. has been individually pressure tested to at least 24,656 pounds per square inch absolute (170 MN/m$^2$) without failure.

b. For sealed sources, except those containing radioactive material in gaseous form, acquired after [insert a date one year after the effective date of this Part], in the absence of a certificate from a transferor certifying that an individual sealed source meets the requirements of Paragraph W.108a., the sealed source shall not be put into use until such determinations and testing have been performed.

c. Each sealed source, except those containing radioactive material in gaseous form, used in downhole operations after [insert a date two years after the effective date of this Part] shall be certified by the manufacturer, or other testing organization acceptable to the Agency, as meeting the sealed source performance requirements for oil well-logging as contained in the American National Standard N43.6, "Classification of Sealed Radioactive Sources," (formerly N542, ANSI/NBS 126) in effect on [insert the effective date of this Part].

d. Certification documents shall be maintained for inspection by the Agency for a period of two years after source disposal. If the source is abandoned downhole, the certification documents shall be maintained until the Agency authorizes disposition.

Sec. W.109 Labeling

a. Each source, source holder, or logging tool containing radioactive material shall bear a durable, legible, and clearly visible marking or label, which has, as a minimum, the standard radiation caution symbol, without the conventional color requirement, and the following wording:

   DANGER/
   RADIOACTIVE

This labeling shall be on the smallest component transported as a separate piece of equipment.

b. Each transport container shall have permanently attached to it a durable, legible, and clearly visible label

1/ or CAUTION

W5
which has, as a minimum, the standard radiation caution symbol and the following wording:

**DANGER**
**RADIOACTIVE**
**NOTIFY CIVIL AUTHORITIES [OR NAME OF COMPANY]**

Sec. W.110  Inspection and Maintenance

a. Each licensee or registrant shall conduct, at intervals not to exceed six months, a program of inspection and maintenance of source holders, logging tools, source handling tools, storage containers, transport containers, and injection tools to assure proper labeling and physical condition. Records of inspection and maintenance shall be maintained for a period of two years for inspection by the Agency.

b. If any inspection conducted pursuant to Paragraph W.110a. reveals damage to labeling or components critical to radiation safety, the device shall be removed from service until repairs have been made.

c. If a sealed source is stuck in the source holder, the licensee shall not perform any operation, such as drilling, cutting, or chiseling, on the source holder unless the licensee is specifically approved by the NRC, an Agreement State, or a Licensing State to perform this operation.

d. The repair, opening, or modification of any sealed source shall be performed only by persons specifically authorized to do so by the Agency, the NRC, an Agreement State, or a Licensing State.

**Requirements for Personnel Safety**

Sec. W.201  Training Requirements

a. No licensee or registrant shall permit any individual to act as a logging supervisor as defined in this Part until such individual has:

i. received, in a course recognized by the Agency, the NRC, an Agreement State, or a Licensing State, instruction in the subjects outlined in Appendix A of this Part and demonstrated an understanding thereof;

ii. read and received instruction in the regulations contained in this Part and the applicable Sections of Parts A, D, and J of these regulations or their equivalent, conditions of appropriate license or certificate of registration, and the licensee's or registrant's operating and emergency procedures, and demonstrated an understanding thereof; and

iii. demonstrated competence to use sources of radiation, related handling tools, and radiation
survey instruments which will be used on the job.

b. No licensee or registrant shall permit any individual to assist in the handling of sources of radiation until such individual has:

i. read or received instruction in the licensee's or registrant's operating and emergency procedures and demonstrated an understanding thereof; and

ii. demonstrated competence to use, under the personal supervision of the logging supervisor, the sources of radiation, related handling tools, and radiation survey instruments which will be used on the job.

c. The licensee or registrant shall maintain employee training records for inspection by the Agency for two years following termination of the individual's employment.

Sec. W.202 Operating and Emergency Procedures. The licensee's or registrant's operating and emergency procedures shall include instructions in at least the following:

a. handling and use of sources of radiation to be employed so that no individual is likely to be exposed to radiation doses in excess of the standards established in Part D of these regulations;

b. methods and occasions for conducting radiation surveys;

c. methods and occasions for locking and securing sources of radiation;

d. personnel monitoring and the use of personnel monitoring equipment;

e. transportation to temporary jobsites and field stations, including the packaging and placing of sources of radiation in vehicles, placarding of vehicles, and securing sources of radiation during transportation;

f. minimizing exposure of individuals in the event of an accident;

g. procedure for notifying proper personnel in the event of an accident;

h. maintenance of records;

i. use, inspection and maintenance of source holders, logging tools, source handling tools, storage containers, transport containers, and injection tools;

j. procedure to be followed in the event a sealed source is lodged downhole;

k. procedures to be used for picking up, receiving, and opening packages containing radioactive material;

l. for the use of tracers, decontamination of the environment, equipment, and personnel;

m. maintenance of records generated by logging personnel at temporary jobsites;
n. notifying proper persons in the event of an accident; and

o. actions to be taken if a sealed source is ruptured, including actions to prevent the spread of contamination and minimize inhalation and ingestion of radioactive material and actions to obtain suitable radiation survey instruments as required by Section W.104.

Sec. W.203 Personnel Monitoring

a. No licensee or registrant shall permit any individual to act as a logging supervisor or to assist in the handling of sources of radiation unless each such individual wears either a film badge or a thermoluminescent dosimeter (TLD). Each film badge or TLD shall be assigned to and worn by only one individual. Film badges must be replaced at least monthly and TLDs replaced at least quarterly. After replacement, each film badge or TLD must be promptly processed.

b. Personnel monitoring records shall be maintained for inspection until the Agency authorizes disposition.

Precautionary Procedures in Logging and Subsurface Tracer Studies

Sec. W.301 Security. During each logging or tracer application, the logging supervisor or other designated employee shall maintain direct surveillance of the operation to protect against unauthorized or unnecessary entry into a restricted area, as defined in Part A of these regulations.

Sec. W.302 Handling Tools. The licensee shall provide and require the use of tools that will assure remote handling of sealed sources other than low-activity calibration sources.

Sec. W.303 Subsurface Tracer Studies

a. Protective gloves and other appropriate protective clothing and equipment shall be used by all personnel handling radioactive tracer material. Precautions shall be taken to avoid ingestion or inhalation of radioactive material.

b. No licensee shall cause the injection of radioactive material into potable aquifers without prior written authorization from the Agency [and any other appropriate State Agency].

Sec. W.304 Particle Accelerators. No licensee or registrant shall permit above-ground testing of particle accelerators, designed for use in well-logging, which results in the production of radiation, except in areas or facilities so controlled or shielded that the requirements of Sections D.101 and D.105 of these regulations, as applicable, are met.
Radiation Surveys and Records

Sec. W.401 Radiation Surveys

a. Radiation surveys or calculations shall be made and recorded for each area where radioactive materials are used and stored.

b. Radiation surveys shall be made and recorded for the radiation levels in occupied positions and on the exterior of each vehicle used to transport radioactive material. Such surveys shall include each source of radiation or combination of sources to be transported in the vehicle.

c. If the sealed source assembly is removed from the logging tool before departing the jobsite, the logging tool detector shall be energized, or a survey meter used, to assure that the logging tool is free of contamination.

d. Radiation surveys shall be made and recorded at the jobsite or well-head for each tracer operation, except those using hydrogen-3, carbon-14, and sulfur-35. These surveys shall include measurements of radiation levels before and after the operation.

e. Records required pursuant to Paragraphs W.401a. through d. shall include the dates, the identification of individual(s) making the survey, the identification of survey instrument(s) used, and an exact description of the location of the survey. Records of these surveys shall be maintained for inspection by the Agency for two years after completion of the survey.

Sec. W.402 Documents and Records Required at Field Stations. Each licensee or registrant shall maintain, for inspection by the Agency, the following documents and records for the specific devices and sources used at the field station:

a. appropriate license, certificate of registration, or equivalent document(s);

b. operating and emergency procedures;

c. applicable regulations;

d. records of the latest survey instrument calibrations pursuant to Section W.104;

e. records of the latest leak test results pursuant to Section W.105;

f. records of quarterly inventories required pursuant to Section W.106;

g. utilization records required pursuant to Section W.107;

h. records of inspection and maintenance required pursuant to Section W.110;

i. survey records required pursuant to Section W.401; and
j. training records required pursuant to Section W.201.

Sec. W.403 Documents and Records Required at Temporary Jobsites. Each licensee or registrant conducting operations at a temporary jobsite shall have the following documents and records available at that site for inspection by the Agency:

a. operating and emergency procedures;

b. survey records required pursuant to Section W.401 for the period of operation at the site;

c. evidence of current calibration for the radiation survey instruments in use at the site;

d. when operating in the state under reciprocity, a copy of the appropriate license, certificate of registration, or equivalent document(s); and

e. shipping papers for the transportation of radioactive material.

Notification

Sec. W.501 Notification of Incidents, Abandonment, and Lost Sources

a. Notification of incidents and sources lost in other than downhole logging operations shall be made in accordance with appropriate provisions of Part D of these regulations.

b. Whenever a sealed source or device containing radioactive material is lodged downhole, the licensee shall:

i. monitor at the surface for the presence of radioactive contamination with a radiation survey instrument or logging tool during logging tool recovery operations; and

ii. notify the Agency immediately by telephone and subsequently, within 30 days, by confirmatory letter if the licensee knows or has reason to believe that a sealed source has been ruptured. This letter shall identify the well or other location, describe the magnitude and extent of the escape of radioactive material, assess the consequences of the rupture, and explain efforts planned or being taken to mitigate these consequences.

c. When it becomes apparent that efforts to recover the radioactive source will not be successful, the licensee shall:

i. advise the well-operator of [insert the regulations of the appropriate state agency regarding abandonment and] an appropriate method of abandonment, which shall include:

   (1) the immobilization and sealing in place of the radioactive source with a cement plug,

   (2) the setting of a whipstock or other deflection device, and
(3) the mounting of a permanent identification plaque at the surface of the well, containing the appropriate information required by Paragraph W.501d.;

ii. notify the Agency by telephone, giving the circumstances of the loss, and request approval of the proposed abandonment procedures; and

iii. file a written report with the Agency within 30 days of the abandonment. The licensee shall send a copy of the report to [insert appropriate State Agency] that issued permits or otherwise approved of the drilling operation. The report shall contain the following information:

(1) date of occurrence;

(2) a description of the well logging source involved, including the radionuclide and its quantity, chemical, and physical form;

(3) surface location and identification of the well;

(4) results of efforts to immobilize and seal the source in place;

(5) a brief description of the attempted recovery effort;

(6) depth of the source;

(7) depth of the top of the cement plug;

(8) depth of the well;

(9) any other information, such as a warning statement, contained on the permanent identification plaque; and

(10) the names of state agencies receiving a copy of this report.

d. Whenever a sealed source containing radioactive material is abandoned downhole, the licensee shall provide a permanent plaque 2/ for posting the well or well-bore. This plaque shall:

i. be constructed of long-lasting material, such as stainless steel or monel; and

ii. contain the following information engraved on its face:

(1) the word "CAUTION";

(2) the radiation symbol without the conventional color requirement;

2/ An example of a suggested plaque is shown in Appendix B of this Part.
(3) the date of abandonment;

(4) the name of the well-operator or well-owner;

(5) the well name and well identification number(s) or other designation;

(6) the sealed source(s) by radionuclide and activity;

(7) the source depth and the depth to the top of the plug; and

(8) an appropriate warning, depending on the specific circumstances of each abandonment.\(^3/\)

e. The licensee shall immediately notify the Agency by telephone and subsequently by confirming letter if the licensee knows or has reason to believe that radioactive material has been lost in or to an underground potable aquifer. Such notice shall designate the well location and shall describe the magnitude and extent of loss of radioactive material, assess the consequences of such loss, and explain efforts planned or being taken to mitigate these consequences.

\(^3/\) Appropriate warnings may include: (a) "Do not drill below plug-back depth"; (b) "Do not enlarge casing"; or (c) "Do not re-enter the hole", followed by the words, "before contacting the [insert the name of the radiation control Agency]".
Part W

APPENDIX A

SUBJECTS TO BE INCLUDED IN TRAINING COURSES
FOR LOGGING SUPERVISORS

I. Fundamentals of Radiation Safety
   A. Characteristics of radiation
   B. Units of radiation dose and quantity of radioactivity
   C. Significance of radiation dose
      1. Radiation protection standards
      2. Biological effects of radiation dose
   D. Levels of radiation from sources of radiation
   E. Methods of minimizing radiation dose
      1. Working time
      2. Working distances
      3. Shielding
   F. Radiation safety practices including prevention of contamination and methods of decontamination

II. Radiation Detection Instrumentation to be Used
   A. Use of radiation survey instruments
      1. Operation
      2. Calibration
      3. Limitations
   B. Survey techniques
   C. Use of personnel monitoring equipment

III. Equipment to be Used
   A. Handling equipment
   B. Sources of radiation
   C. Storage and control of equipment
   D. Operation and control of equipment

IV. The Requirements of Pertinent Federal and State Regulations

V. The Licensee's or Registrant's Written Operating and Emergency Procedures

VI. The Licensee's or Registrant's Record Keeping Procedures
APPENDIX B

EXAMPLE OF PLAQUE FOR IDENTIFYING WELLS CONTAINING SEALED SOURCES CONTAINING RADIOACTIVE MATERIAL ABANDONED DOWNHOLE

The size of the plaque should be convenient for use on active or inactive wells, e.g., a 7-inch square. Letter size of the word "CAUTION" should be approximately twice the letter size of the rest of the information, e.g., 1/2-inch and 1/4-inch letter size, respectively.
